DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 30-32, 37, 63-65, 85, 114-116, 123, and 124, drawn to determining a wireless transmission based on the minimum path loss, classified in class 370, subclass 252.
- II. Claims 2-29, 38-62, 70-81, 86-113, 120-122, and 125-127 drawn to routing a signal based on metrics, classified in class 709, subclass 241.
- III. Claims 33-36, 66-69, 82-84, and 117-119 drawn to use of multiple frequency bands for relaying information, classified in class 455, subclass 447.

The inventions are distinct, each from the other because of the following reasons:

Inventions I., II., and III. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because each group can function without the particulars of the other two groups. The subcombination has separate utility such as least cost routing, frequency allocation, and path loss determination.

Art Unit: 2662

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I. is not required for Group II., or Group III. restriction for examination purposes as indicated is proper.
